Installation

These scenarios are packaged in the same ".rwp" file. Install it through the Train Simulator 2014 package manager. These scenarios were created on the version 3 of the route. They may not work with previous route versions.

Important note for TTB users

If you have the TTB BR 143 PlusPack add-on installed on your system, please be aware that an issue is appearing while driving push-pull trains with the cab car and the BR143 that are delivered with the route package: you won't be able to drive one of both (some commands will be blocked). Removing this TTB PlusPack is not either a good idea because this pack is modifying the ABn and Bn cars that are included in the EU asset pack (or previous Railworks editions) and, doing so, some scenarios will crash when loading (scenarios 26 and 29 for example). The only solution is to reinstall the vehicles from the route package.

Thanks

I'd like to thank all route and rolling stock/reskin creators.

Thanks to Ralf Kroneberg for the german translations.

To report any problem or feedback, please send an email to railworks@beluxtrains.net.

Have fun !
